DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114 was filed in this application after a decision by the Board of Patent Appeals and Interferences, but before the filing of a Notice of Appeal to the Court of Appeals for the Federal Circuit or the commencement of a civil action. Since this application is eligible for continued examination under 37 CFR 1.114 and the fee set forth in 37 CFR 1.17(e) has been timely paid, the appeal has been withdrawn pursuant to 37 CFR 1.114 and prosecution in this application has been reopened pursuant to 37 CFR 1.114. Applicant's submission filed on 11/21/2008 has been entered.
2. In view of the BPAI decision, the previous 112 1st ¶ rejections of record are hereby withdrawn.

Claim Rejections - 35 USC § 102

3. The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.
4. Claims 1, 3-5 and 12-14 are rejected under 35 U.S.C. 102(b) as being anticipated by Kagerer et al. (WO 200177200).

In US 20030124357, which is the English language translation of WO 200177200, Kagerer et al. teach a process for preparing polyurethane-polyacrylate hybrid dispersions, comprising polymerizing vinyl monomers, such as hydroalkyl esters of acrylic acid, in the presence of saturated polyurethanes. The preparation of the polyurethanes involves reacting the, polyisocyanates with polyols (§ 53), wherein the polyurethanes, prior to reacting with the vinylically unsaturated acrylic acids, have molecular weights from 1500 to 5500 Daltons. (See §§ 23,46, 102) In § 137, Kagerer et al. teaches dispersing the non-aqueous solution of the polyurethane-polyacrylate hybrid in water to for a secondary dispersion.

The hydroxy functional isocyanate-reactive components of Kagerer et al. meet the requirements of the present claims, notwithstanding the additional step of adding thiol reactants to the intermediate polyurethane product to form the polyurethanes (A) prior to grafting. The hydroxy functional isocyanate-reactive components of Kagerer et al. meet the requirements for the isocyanate-reactive components in the present claims.

Thus, the requirements for rejection are met.

Response to Arguments

5. Applicant's arguments filed 11/21/2008 have been fully considered but they are not persuasive.

Contrary to applicant's arguments, the insertion of the word "exclusively" in the claims does NOT preclude other reactants or step with regard to the NCO groups of the polyisocyanates, other than the isocyanate reactive groups of compounds from (A2)-

(A5). The claims still recites the preamble language "comprising", which still does not exclude additional reaction steps employing additional isocyanate-reactive components, such as those containing thiols.
